

ACKNOWLEDGEMENTS

As with this thesis, I am grateful to many people for invaluable encouragement. Particular thanks are due to Dr. Eren Erdener, thesis advisor, who taught me research methods and sincere academic attitudes.

In addition, I would like to thank Professor Joel K. Dietrich and Professor M. Iver Wahl, thesis committee members, for their continuing interest, advice and encouragement.

Also, I would like to thank Professor Raymond Yeh, Dean of College of Architecture, Dr. Claude E. Duchon, Director of Oklahoma Climatological Survey, and Dr. Eddie C. Smith, Associate Dean of Graduate College of University of Oklahoma, who awarded the author with research fund for the completion of the project concerning the weather data base.

Most of all, my father and mother, who have been sacrificing themselves back in my country, Korea, for my academic achievement, are those whom I cannot express thanks in any words.

Finally, I would like to thank my wife Kang Yi for her love, endurance and frugal life, and my daughter Jeeyoung for her excellent health which let me concentrate only on the study.
